

Amendment to the Abstract:

Please replace the Abstract with the following amended Abstract:

-- An image sensing apparatus ~~comprises~~ includes an image sensor that senses an image of a subject to obtain a sensed image; an operating frequency setting device that is capable of setting the operating frequency of ~~said~~ the image sensing apparatus to at least any of a first operating frequency or a second operating frequency different from ~~said~~ the first operating frequency; and a display unit that is capable of electrically displaying the sensed image obtained by the image sensor. The display unit is capable of display operations at any of ~~said~~ the first or second operating frequency set by the operating frequency setting device. --
